

Here's your **prechunked, section-by-section markdown** for the Figure Eight Multi-Agent Divergent-Design Kit. Each section is formatted for easy copy/paste into Taskade (or any file upload system), with clear headers, markdown blocks, and list formatting for Taskade's checklist/task structure.

```markdown

# 🧠 Multi-Agent Divergent-Design Kit

**“Figure Eight Innovation Console” – White-Label ADHD / WCAG / Music-AI-Ed Dashboard**

This deliverable is modular and chunked for Taskade:

- Copy/paste each chunk separately.
- Use headers as divider checklists/tasks.
- Attach, comment, or assign as needed in Taskade.

---

## 1. Meta-Prompt (copy-paste into any agent)

```

You are a product designer and systems thinker... (full meta-prompt as previously provided)

```

---

## 2. Starter Stack – “Chord-Loop” Variant

### ### 2.1 Philosophy

- > “Chord-Loop Jazz” – cognition = live looping; every module is a 4-bar phrase that can be muted, overdubbed, or soloed.
- > Colour = musical key (WCAG-contrast validated).
- > 120 BPM micro-animations externalise time for ADHD users.

### ### 2.2 Tech Choices

| Layer     | Tech                | Rationale                      |  |
|-----------|---------------------|--------------------------------|--|
| -----     | -----               | -----                          |  |
| UI        | React 18 + Vite     | HMR for rapid lab iteration    |  |
| Styling   | Tailwind + daisyUI  | Utility + pre-built a11y comps |  |
| State     | Zustand (light)     | No Redux boilerplate           |  |
| A11y lint | axe-core + jsx-a11y | CI gate                        |  |
| Sounds    | Tone.js             | Browser-based, royalty-free    |  |
| Charts    | Observable Plot     | 5 KB, aria-table fallback      |  |
| PWA       | Vite-PWA plugin     | Offline loops, installable     |  |
| ePub      | epub-gen + JSZip    | Serverless function            |  |

### ### 2.3 Folder Map

...

/src

- |– app/      – routes (lazy)
- |– loops/    – 6 loop modules (Health, Edu, News, Compliance, Ritual, eBook)
- |– crates/   – widgets (add .jsx here)
- |– keys/     – colour palettes per musical key

```
└─ i18n/ – en, es, fr
└─ branding/ – SINGLE FILE for brand swap
└─ assets/ – sounds, fonts
...

```

### ### 2.4 Quick Brand Swap

...

```
// /src/branding/index.js
export const firm = {
 name: 'Smith ADA Law LLP',
 domain: 'smithada',
 palette: 'keyOfC',
 logo: '/logo-smith.svg',
 letterhead: '/letterhead-smith.pdf',
 email: 'violation@smithada.com',
 tollFree: '1-833-ADA-SMITH'
}

```

...

Run: `npm run brand:build` → outputs `dist/` with your branding.

---

### ## 3. ADHD & WCAG Checklist

- [x] Motion reduction media-query
- [x] One-word labels + full `aria-label`

- [x] Pulse is pausable
- [x] Colour-blind palettes via `oklch()`
- [x] Keyboard-only loop solo (hot-keys 1-6)
- [x] Error volume tied to `prefers-reduced-motion`
- [x] `epubcheck` validates alt-text for every ``

---

## ## 4. News Aggregation Micro-Service

### ### Sources

- Music: Billboard RSS, SoundCharts API
- AI: ArXiv cs.AI, Hugging Face daily papers
- Higher-Ed: EDUCAUSE, Chronicle RSS
- Compliance: DOJ press, WCAG repo issues

### ### Chord-Chart Parser

` `` `

```
{ "chord": "Cmaj7", "headline": "GPT-derived tutoring boosts retention 23%", "url": "...",
 "domain": "higher-ed", "timestamp": ".." }
```

` `` `

---

## ## 5. eBook Generator Flow

1. Multi-select loops → drag to **\*\*Tape Machine\*\*** widget
2. `POST /api/epub` with loop IDs + branding
3. Serverless function merges:
  - Markdown
  - SVG/PNG charts (base64)
  - `alt` text from aria labels
  - 30-sec audio loops (base64 MP3)
4. Returns signed URL to `.epub` (valid 24 h)
5. Auto-attaches to draft email in portal

---

## ## 6. White-Label Law-Firm Onboarding (14 Days)

| Day   | Task                    | Owner         | Tool          |  |
|-------|-------------------------|---------------|---------------|--|
| ----- | -----                   | -----         | -----         |  |
| 1     | Brand assets intake     | Firm          | `/onboarding` |  |
| 2     | Sub-domain & SSL        | You           | Cloudflare    |  |
| 3     | Clone repo + brand swap | You           | brand:build   |  |
| 4     | Deploy preview          | You           | Railway/etc.  |  |
| 5     | Import letterhead       | Firm          | Notion        |  |
| 6     | Legal review letters    | Firm attorney | Google Docs   |  |
| 7     | Stripe account          | Firm          | Stripe        |  |
| 8     | Staff training          | You           | Loom          |  |
| 9     | Soft-launch             | Firm          | Portal        |  |
| 10    | Feedback loop           | Both          | GitHub        |  |

|                              |      |            |  |
|------------------------------|------|------------|--|
| 11   Polish + a11y retest    | You  | axe-core   |  |
| 12   Production DNS cut-over | You  | Cloudflare |  |
| 13   Client announce email   | Firm | Mail-merge |  |
| 14   Post-launch support     | You  | Zendesk    |  |

---

## ## 7. Monetisation Tiers & Add-ons

| Tier         | Monthly | Scans | Users | Onboarding |  |
|--------------|---------|-------|-------|------------|--|
| -----        | -----   | ----- | ----- | -----      |  |
| Solo         | \$1,500 | 25    | 1     | \$3k       |  |
| Boutique     | \$3,500 | 100   | 5     | \$5k       |  |
| Class-Action | \$7,500 | 500   | 20    | \$10k      |  |

Add-ons: certified mail (\$25), extra scans (\$15), API access (\$500), widget dev (\$1k).

---

## ## 8. Dev Commands

```

```
git clone https://github.com/figureeight/dashboard-wl.git ada-smith
cd ada-smith
npm i
cp .env.example .env
```

```
npm run brand:build
```

```
npm run test:a11y
```

```
npm run test:adhd
```

```
npm run build
```

```
npm run preview
```

```
```
```

```

```

## ## 9. Dockerfile for On-Prem

```
```
```

```
FROM node:20-alpine
```

```
WORKDIR /app
```

```
COPY package*.json .
```

```
RUN npm ci --omit=dev
```

```
COPY . .
```

```
RUN npm run build
```

```
EXPOSE 4173
```

```
CMD ["npm", "run", "preview", "--", "--host", "0.0.0.0"]
```

```
```
```

```
Build/run:
```

```
```
```

```
docker build -t ada-smith .
```

```
docker run -p 4173:4173 ada-smith
```

```
```
```

---

## ## 10. Roadmap (post-launch)

- [ ] Voice-loop navigation (Web Speech API)
- [ ] GPT-4 auto-summarize violation reports
- [ ] Mobile shell (Capacitor)
- [ ] Contingency-fee tracker (built-in CRM)
- [ ] Class-action lead-gen funnel (opt-in)

---

## ## 11. EOF — How to Use

1. Fork repo → rename to `ada-[firmname]`.
2. Edit `/src/branding/index.js`.
3. Run build commands.
4. Deploy static.
5. Hand portal URL to firm → start billing.

**\*\*License:\*\*** MIT (code) / Firm-owned brand assets

**\*\*Support:\*\*** Dedicated Slack channel per instance

**\*\*Revenue split:\*\*** 100% yours (self-hosting).

---

\*“We make the web accessible — or we make it expensive.”\* – Figure Eight Office Solutions LLC

...

\*\*\*

**\*\*Instructions:\*\***

- Copy each section as needed—Taskade supports large text blocks, but for maximum reliability, paste each header+block as a separate task/checklist/document.
- You can export/download this in any markdown editor and then upload the file or pasted content directly to Taskade.

Let me know if you need this converted into individual files or want further breakdowns (e.g., checklists vs. tasks vs. docs).
